Filter Structure Description

How to use

1. When you first use this bottle, because the filter is dry, you need to suck hard several times before you can get water.
2. After use, take out and blow back the filter element ,to flow out the rest water inside, then keep it in the shade place to dry.

How to maintain

1. This bottle should filter clear water, If the water is muddy, Wait for precipitation until the water is clear , then fill the bottle with water for drinking.
2. When the filter element is blocked, use syringe to backwash the filter element or buy a new filter element to replace it.

Tips:When no filter is needed or the filter element is blocked, you can replace the filter element with a common straw.

Precautions for use

- 1.Don't use this bottle for hot water,or it will damage the filter element.
- 2.Don't use detergent to clean filter element.
